# Additional explanation of Performance Fees

Performance Fees may be paid to a Model Portfolio Manager if a Model Portfolio adds value over a benchmark. The benchmark may be an index, an amount in excess of an index, zero or a specified return (for example 2% or the RBA Cash Rate).

The value added for each Model Portfolio relative to the benchmark is calculated for each Account each day of the performance period. Performance periods are calendar months unless otherwise stated in the Model Portfolio profile.

If the total value added for the period is negative no Performance Fee is payable and this amount is carried forward to the next period. A Performance Fee is only paid at the end of the performance period if the total value added for the period, plus any value added or carried forward from previous performance periods, is positive. Value added for a Model Portfolio includes all dividends but excludes any franking credits unless otherwise stated.

This means you will not pay a Performance Fee unless the total value added relative to the benchmark since inception for your Account is higher than at the end of any previous performance period.

Some Models may impose an additional condition, which is that a Performance Fee is only paid where the return of the Model, after payment of Performance Fees (absolute return), is positive. Where the return of the Model is negative, the Performance Fee otherwise payable is carried forward.

The Performance Fee calculation is specific to each Account, so for any particular Model Portfolio over a performance period, some Accounts may be charged a Performance Fee while others are not, depending on the circumstances applicable to each investor's particular Account. For example, the timing of when the Account invested in a Model Portfolio will influence what, if any, Performance Fee is charged to the Account in respect of its allocation to that Model Portfolio. For Performance Fee calculation purposes we consider only the Model Portfolio's performance and the weighting of your Account to the particular Model. We ignore individual customisations and exclude the minimum cash component.

## Examples of calculation of Performance Fee

The following examples are simplistic and for illustrative purposes only and may not reflect the actual Performance Fee charged to your Account.

### Example 1. Value added over a benchmark

Assume an amount of \$100,000 is invested for 12 months, and the Performance Fee is calculated annually.

If the Model Portfolio's return for the year is 25% and the benchmark return is 20% then the excess performance is 5% and the Performance Fee would be calculated as follows:

- the investment return achieved is 25% of \$100,000 = \$25,000
- the benchmark return is 20% of \$100,000 = \$20,000
- value added (excess performance above benchmark) is (\$25,000 - \$20,000) = \$5,000

If the Performance Fee is 25% of excess performance above benchmark, then the fee charged by the Responsible Entity would be 25% of \$5,000 = \$1,250.

If the Performance Fee is 10% of excess performance above benchmark, then the fee charged by the Responsible Entity would be 10% of \$5,000 = \$500.

### Example 2. Value added over an amount in excess of a benchmark

Assume an amount of \$100,000 is invested for 12 months, and the Performance Fee is calculated annually. If the Model Portfolio's return for the year is 25% and the benchmark return is 20% and the performance fee is based on the benchmark plus 2% then the excess performance is 25% - (20% + 2%) = 3% and the Performance Fee would be calculated as follows:

- the investment return achieved is 25% of \$100,000 = \$25,000
- the benchmark return plus 2% is (20% + 2%) of \$100,000 = \$22,000
- value added (excess performance above benchmark) is (\$25,000 - \$22,000) = \$3,000

If the Performance Fee is 25% of excess performance above the benchmark plus 2%, then the fee charged by the Responsible Entity would be 25% of \$3,000 = \$750.

If the Performance Fee is 10% of excess performance above the benchmark plus 2%, then the fee charged by the Responsible Entity would be 10% of \$3,000 = \$300.

### Example 3. Performance must be greater than zero (absolute return)

Assume an amount of \$100,000 is invested for 12 months, and the Performance Fee is calculated annually. If the Model Portfolio's return for the year is -3% and the benchmark return is -5% then the excess performance is 2%. No Performance Fee would be payable as the Model Portfolio's return is less than 0%. However, the Performance Fee would be carried forward as follows:

- the investment return achieved is -3% of \$100,000 = -\$3,000
- the benchmark return is -5% of \$100,000 = -\$5,000
- value added (excess performance above benchmark) is (-\$3,000 - [-\$5,000]) = \$2,000

At the end of the next performance period \$2,000 will be added to the value added calculated for the new period. Though calculated daily the Performance Fees are assessed monthly, therefore you will only pay Performance Fees in respect of a Model Portfolio which added value over the month.

# Model Portfolio profiles

Code	AA0001	AD0001	AD0002						
Model Portfolio name	<b>Arnhem Australian Equity</b>	<b>Ausbil Dexia Australian Active Equity</b>	<b>Ausbil Dexia Australian Emerging Leaders</b>						
Investment Description	The Arnhem Australian Equity Model Portfolio will hold 30 to 40 stocks. Cash positions are targeted to be as small as practically possible and are typically less than 2%. The Model Portfolio seeks to be fully invested.	The Model invests in listed Australian equities which are selected from the S&P/ASX 300 Accumulation Index.	The Australian Emerging Leaders Model Portfolio invests in a wide range of assets consisting of listed Australian equities. The securities are chosen from the S&P/ASX 300 Accumulation Index. The Australian Emerging Leaders Model Portfolio invests in both mid and small cap stocks which possess potential for superior growth.						
Investment objective	To provide capital appreciation and outperformance of the S&P/ASX 200 Accumulation Index by 2 to 3% per annum, over the medium term (3 years) through investment in shares listed in Australia.	To outperform the S&P/ASX 300 Accumulation Index and to provide medium to long term growth with moderate tax-effective income.	To outperform the performance benchmark, a combination of 70% S&P/ASX Midcap 50 Accumulation Index and 30% S&P/ASX Small Ordinaries Accumulation Index and to provide medium to long term growth with moderate tax effective income.						
Who is this option suitable for?	<ul style="list-style-type: none"> <li>■ Investors who seek an Australian share portfolio that provides exposure to a combination of large, mid and some smaller capitalisation stocks; and</li> <li>■ Accept the risk of significant price fluctuations.</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who seek growth: and</li> <li>■ Seek income.</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who seek growth: and</li> <li>■ Seek income.</li> </ul>

Model Portfolio name	<b>BlackRock Equity Yield Focus</b>	<b>Burrell Stockbroking 20</b>	<b>Chimaera Index Enhanced Franked Income</b>	<b>DNR Capital Australian Equities High Conviction</b>					
Investment description	The Model Portfolio invests in stocks which are expected to pay grossed-up dividend yields (including anticipated special dividends) in excess of the market average over the medium term.	The Burrell 20 comprises the top 20 stocks in the S&P index measured by market capitalisation, subject to a small degree of substitution based on research reports and other insights from Burrell Stockbroking.	The Chimaera Index Enhanced Franked Income model consists of 30 - 60 ASX listed blue chip companies in similar sector proportions to widely recognised broad based Australian market indices such as the S&P / ASX 200.	The model invests in Australian quality companies that are mispriced by overlaying the manager's quality filter with strong valuation discipline.					
Investment objective	To provide the investor with a tax effective and growing income stream sourced primarily from dividend payments by companies listed on the Australian Stock Exchange. Through investing in equity markets there is also the prospect of capital gains over time.	To achieve capital growth over the medium to long term with close correlation to the S&P/ASX20 Index and to provide income through the receipt of franked dividends.	To generate an after tax return that consistently exceeds an indexed based return, with high levels of franked income, from an index weighted Australian equity portfolio.	To outperform the S&P/ASX 200 Accumulation Index by 4% p.a. over a rolling 3 year period.					
Who is this option suitable for?	<ul style="list-style-type: none"> <li>■ Investors who seek a tax-effective income stream with some capital growth; and</li> <li>■ Accept the risk that some volatility will be experienced.</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who seek market returns and market risk.</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who are lower tax bracketed investors including retirees seeking income;</li> <li>■ Are active investors who require high liquidity for asset allocation;</li> <li>■ Are looking for a blue chip Australian equity portfolio designed to provide superior income and franking benefits;</li> <li>■ Seek tax efficient income</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who seek an exposure to the Australian share market with a long-term investment objective;</li> <li>■ Seek portfolio growth with less focus on generating excess income; and</li> <li>■ Are prepared to accept higher volatility in return for higher growth.</li> </ul>

Code	FP0001	FP0003			
Model Portfolio name	<b>Fat Prophets Concentrated Australian Share Model Portfolio ("FPCASMP")</b>	<b>Fat Prophets Australian Share Income Model Portfolio ("FPASIMP")</b>			
Investment description	The investment objective of FPCASMP is pursued by investing in a small sample of securities taken from within and outside the S&P/ASX 200 Accumulation Index ("Index"). The Index is comprised of the 200 largest and most liquid securities in the Australian stock market.  The Model Portfolio typically holds 10 to 30 securities.	The investment objective of the FPASIMP is pursued by investing in a diversified selection of securities linked to companies listed within the S&P/ASX 200 Industrial Accumulation Index ("Index"). The Index is comprised of the 200 largest and most liquid industrial securities in the Australian stock market.  The Model Portfolio typically holds 10 to 40 securities.			
Investment objective	To outperform the total return (both income and capital growth) of the S&P/ASX 200 Accumulation Index, before taking into account FPCASMP fees and expenses.	To deliver a level of income in excess of that generated by the S&P/ASX 200 Industrial Accumulation Index, before taking into account FPASIMP fees and expenses.			
Who is this option suitable for?	<ul style="list-style-type: none"> <li>■ Investors who seek a concentrated portfolio of Australian securities;</li> <li>■ Are looking for a medium to long term investment; and</li> <li>■ Accept the risk of significant price fluctuations.</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who are looking for exposure to a diversified portfolio of shares;</li> <li>■ Seek income with the possibility of some growth in capital over the medium to long term; and</li> <li>■ Accept the risk of potential fluctuations in income and capital.</li> </ul>

Code	JB0003	LO0001	LO0002	LO0006					
Model Portfolio name	<b>JBWere Fixed Income</b>	<b>Lonsec Core</b>	<b>Lonsec Income</b>	<b>Lonsec Emerging Leaders</b>					
Investment description	The model consists of ASX listed hybrids, bonds. Reflective of its focus as a defensive investment, the Model Portfolio is not expected to be a highly-traded portfolio.	Lonsec Core is an actively managed model made up of ASX listed stocks. It focuses on generating absolute returns, over the medium to long term, through concentrated, low-turnover portfolios across a number of industry classifications.	The Lonsec Income model invests in a concentrated portfolio of large-cap Australian listed companies, chosen to provide above benchmark income yields.	Lonsec Emerging Leaders model invests in a diversified portfolio of emerging Australian listed companies. It focuses on generating absolute returns, over the medium to long term, through a concentrated, low-turnover portfolio.					
Investment objective	To construct a relatively defensive Model Portfolio that aims to: <ul style="list-style-type: none"> <li>Have a capital preservation focus and one exhibiting a low level of capital and earnings volatility</li> <li>Adequately rewards the investor for the credit, market and liquidity risk assumed</li> <li>Provide a steady and secure income stream</li> <li>Provide a solid absolute return that represents a premium to rates earned on term deposits</li> <li>Be liquid enough to ensure sufficient investing flexibility.</li> </ul>	To deliver strong absolute returns, over the medium to long term, invested across a number of industry classifications.	To deliver an above-benchmark, tax-effective income stream and reasonable capital growth, over the medium to long term, by investing in a concentrated portfolio of large-cap Australian listed companies.	To deliver strong returns above benchmark, over the medium to long term, by investing in a diversified portfolio of emerging Australian listed companies.

Model Portfolio name	<b>Perennial Value Australian Shares</b>	<b>Ralton Australian Shares</b>	<b>Ralton High Yield Australian Shares</b>	<b>Ralton Smaller Companies</b>				
Investment description	<p>Then model invests in a diversified portfolio of listed, or soon to be listed, Australian shares which Perennial Value believes will provide a combination of capital growth and income.</p> <p>The Model Portfolio will typically consist of approximately 45 Australian shares, with a minimum of 20 and a maximum of 70 shares.</p>	<p>The model made up of a concentrated portfolio of Australian shares, aiming to provide investors with attractive long term returns.</p>	<p>The model invests in quality ASX listed companies that are assessed as likely to provide investors with attractive long-term returns (capital growth plus above average yield and franking).</p>	<p>The model invests in quality smaller capitalisation companies that are assessed as likely to provide investors with attractive long term returns.</p>				
Investment objective	To provide a total return (after model fees) that exceeds the S&P/ASX 300 Accumulation Index, measured on a rolling three-year basis.	To provide investors with long-term capital growth and some tax effective income from a concentrated portfolio of Australian shares. The Model aims to deliver a return superior to that of the market over periods of five years or longer while at the same time seeking to minimise the risk of investment capital loss.	To provide investors with a consistent, tax-efficient and growing cash dividend yield, and long-term capital growth. The Model aims to deliver a return superior to that of the market over periods of five years or longer and an above market yield.	To provide investors with long-term capital growth and some tax effective income from a concentrated portfolio of smaller capitalisation Australian shares. The Model aims to deliver a return superior to that of the market over periods of five years or longer while at the same time seeking to minimise the risk of investment capital loss.

Code	RA0008	SM0001	UB0001	US0001					
Model Portfolio name	<b>Ralton Leaders</b>	<b>Smart Investment ASX Top20</b>	<b>UBS High Alpha Long Term Opportunity (HALO)</b>	<b>Urquhart Sexton Financial Planning Balanced</b>					
Investment description	The model invests in quality larger capitalisation companies that are assessed as likely to provide investors with attractive long term returns relative to the Index.	This model is passively managed and invests in a representative sample of shares that are the largest (by market capitalisation) listed on the ASX.	The UBS High Alpha Long Term Opportunity (HALO) Model Portfolio invests in a concentrated portfolio of ASX listed equities.	The Model is a diversified portfolio holding investments between the four core assets; cash, interest bearing deposits and bonds, listed property, and direct Australian shares.					
Investment objective	To provide investors with long-term capital growth and tax effective income from a portfolio of blue-chip Australian shares. The Model aims to deliver returns that are consistently above the S&P/ASX 100 Accumulation Index over a three to five year period	Seeks index-like total returns (before taking into account Model Portfolio fees and expenses) from the income and capital growth of large capitalisation stocks listed on the ASX.	The UBS High Alpha Long Term Opportunity (HALO) Model Portfolio invests in a more concentrated portfolio focusing on domestic equities with an aim of generating returns in excess of the S&P/ASX 200 Accum. Index over the course of a market cycle.	To achieve an upside return including growth and income of 7%. Tax consequences and Administration fees are not taken into account. The recommended time frame for investment is 3 to 5 years.  The model strategy involves investing in asset classes whose anticipated returns, when combined, are likely to achieve the Models return objective with the least amount of risk.					
Who is this option suitable for?	<ul style="list-style-type: none"> <li>Investors who seek long term capital growth and tax effective income from a portfolio of larger and more liquid shares;</li> <li>Seek consistent above market returns; and</li> <li>Have a long term investment horizon of at least five years and accept the risk of significant price fluctuations.</li> </ul>	<ul style="list-style-type: none"> <li>Investors who seek a portfolio of large capitalisation Australian equities;</li> <li>Accept a portfolio that delivers index-like returns without any active investment management; and</li> <li>Accept that the price of underlying securities may fluctuate significantly.</li> </ul>	<ul style="list-style-type: none"> <li>Investors who seek a more concentrated portfolio of securities listed on the ASX;</li> <li>Are prepared to invest through the market cycle; and</li> <li>Will tolerate, due to the inherent volatility of share markets, investment returns that fluctuate and may even be negative in some periods.</li> </ul>	<ul style="list-style-type: none"> <li>Investors who require better than cash returns, who are happy to take some risk and do not want to be exposed to large negative portfolio returns.</li> </ul>

Model Portfolio name	<b>Agentia Accumulation/ Growth – Moderately Low</b>	<b>Agentia Accumulation/ Growth – Balanced</b>	<b>Agentia Accumulation/ Growth – Moderately High</b>	<b>Agentia Accumulation/ Growth – High</b>
Investment description	Agentia Accumulation/ Growth Portfolios have been developed to meet the requirements of seven different risk profiles. This model uses an asset allocation split of 35% growth and 65% defensive assets plus or minus 5%.	Agentia Accumulation/ Growth Portfolios have been developed to meet the requirements of seven different risk profiles. This model uses an asset allocation split of 50% growth and 50% defensive assets plus or minus 5%..	Agentia Accumulation/Growth Portfolios have been developed to meet the requirements of seven different risk profiles. This model uses an asset allocation split of 65% growth and 35% defensive assets plus or minus 5%. .	Agentia Accumulation/ Growth Portfolios have been developed to meet the requirements of seven different risk profiles. this model uses an asset allocation split of 80% growth assets and 20% defensive assets plus or minus 5%..
Investment objective	To maximise the probability of achieving returns of CPI (Inflation) +2% over rolling 4 year periods. The portfolio also aims to minimise the risks of short term falls in portfolio value subject to these parameters.	To maximise the probability of achieving returns of CPI (Inflation) +3% over rolling 5 year periods. The portfolio also aims to minimise the risks of short term falls in portfolio value subject to these parameters.	To maximise the probability of achieving returns of CPI (Inflation) +4% over rolling 7 year periods using an asset allocation. The portfolio also aims to minimise the risks of short term falls in portfolio value subject to these parameters.	To maximise the probability of achieving returns of CPI (Inflation) +4-5% over rolling 9 year periods. The portfolio also aims to minimise the risks of short term falls in portfolio value subject to these parameters.
Who is this option suitable for?	<ul style="list-style-type: none"> <li>Consider capital security to be somewhat more important than capital growth;</li> <li>Accept that avoiding fluctuations in capital value means a relative lack of capital growth;</li> <li>Accept a lack of capital growth in order to achieve capital security;</li> <li>Are likely to invest the majority of a portfolio in defensive assets to achieve a reasonable level of capital security, with diversification into growth assets to maintain capital growth; and</li> <li>Have an investment time frame of 4 years plus.</li> </ul>	<ul style="list-style-type: none"> <li>Seek a balance between capital growth and capital security;</li> <li>Understand that investment strategies can lead to fluctuations in capital value;</li> <li>Expect that capital growth and capital security must be compromised to achieve investment objectives;</li> <li>Are just as likely to invest in defensive assets as growth assets;</li> <li>Understand that portfolio diversification is important to achieve the investment outcome; and</li> <li>Have an investment time frame of 5 years plus.</li> </ul>	<ul style="list-style-type: none"> <li>Consider capital growth to be somewhat more important than capital security;</li> <li>Accept that seeking capital growth will lead to fluctuations in capital value;</li> <li>Accept a lack of capital security in order to achieve capital growth;</li> <li>Are likely to invest a majority of a portfolio in growth assets, with a significant minority in defensive assets;</li> <li>Know that a portfolio must have growth assets; and</li> <li>Have an investment time frame of 7 years plus.</li> </ul>	<ul style="list-style-type: none"> <li>Consider capital growth to be more important than capital security;</li> <li>Are comfortable with fluctuations in the capital value of their investments;</li> <li>Are comfortable with a lack of capital security in order to achieve capital growth;</li> <li>Are likely to invest a majority of the portfolio in growth assets; and</li> <li>Have an investment time frame of 9 years plus.</li> </ul>

Model Portfolio name	<b>Agentia Accumulation/ Growth – Very High</b>	<b>Cash Model</b>																																																		
Investment description	Agentia Accumulation/Growth Portfolios have been developed to meet the requirements of seven different risk profiles. This model uses an asset allocation split of 90% growth assets and 10% defensive assets plus or minus 5%.	All cash monies are held in a bank account or invested in a SMA holding in a cash fund. Any interest or income earned on cash that is held in respect of your Account will be credited to your Account as and when it is received.																																																		
Investment objective	To maximise the probability of achieving returns of CPI (Inflation) +5% over rolling 10 year periods. The portfolio also aims to minimise the risks of short term falls in portfolio value subject to these parameters.	To provide a low risk investment return by investing in cash assets with high liquidity.																																																		
Who is this option suitable for?	<ul style="list-style-type: none"> <li>■ Investors who seek to maximise capital growth without considering capital security;</li> <li>■ Disregard significant fluctuations in capital value;</li> <li>■ Disregard capital security in order to achieve capital growth;</li> <li>■ Are likely to invest the entire portfolio in growth assets to focus on a higher level of return; and</li> <li>■ Have an investment time frame of 10 years plus.</li> </ul>	<ul style="list-style-type: none"> <li>■ Investors who seek a low risk investment with regular income; and</li> <li>■ Seek capital preservation.</li> </ul>
