Objective

To provide growth in capital value over time through a focus on the best global multi-asset opportunities. The portfolio aims to outperform the benchmark over a multi-year timeframe.

Strategy

Appropriately-diversified, concentrated portfolio of attractively-valued global assets and outstanding businesses. The portfolio will typically be modestly tilted to growth-style assets, but the weighting to asset classes will be altered at times to take advantage of transient opportunities to boost portfolio returns and minimise risks.

Suitability and Risk

Investors suiting this strategy seek total returns comfortably in excess of inflation, but are willing to accept a lower return than otherwise given the possible need to access a stable income stream and wish to mitigate portfolio volatility through a reasonable weighting to income-style assets.

Transactions During the Month
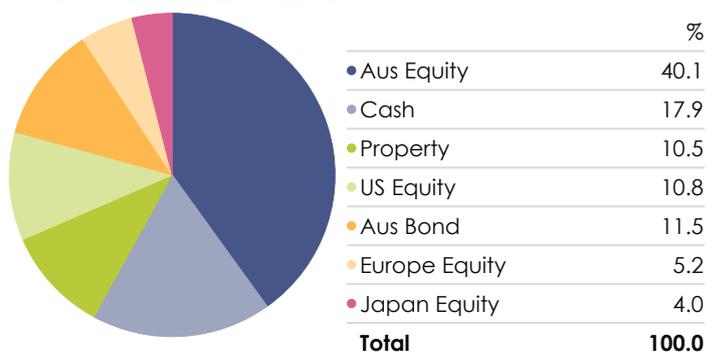

Our patient, high-quality, low-turnover approach means transactions will be infrequent, thereby saving on execution and administration costs.

There were no transactions during the month.

Dynamic Asset Allocation Approach

How We Preserve and Grow Long-Term Wealth

AssureInvest establishes an actively-managed long-term investment plan suited to each client's unique financial and lifestyle goals, by:

1. Strategic Asset Allocation

We set a unique long-term investment plan depending on the investor's risk profile. This determines the targeted weighting range for each asset class.

2. Tactical Asset Allocation

We tilt asset class weights within strategic asset allocation ranges to take advantage of market opportunities to maximise potential returns and reduce the chance of permanent capital loss. Even these tactical tilts have a multi-year time-frame. The short-term focus of most market participants frequently creates attractive opportunities for investors with a longer-term view.

3. Security Selection

We use qualitative and quantitative techniques to uncover great individual security investment opportunities, focussed on long-term fundamental quality and value.

4. Low-Cost Implementation

We reduce investment costs and boost transparency through our preference for individual securities, exchange-traded funds (ETFs) and efficient implementation, while low portfolio turnover reduces transaction costs.
